bachelor degree program *information design*
at the university of applied sciences, graz

sep 2015 – jun 2017

diploma with distinction at college for
communication- and mediadesign, krieglach

what skills I earned – so far

computer literacy

while becoming a designer and getting a taste of all the different design fields during my education and work positions, I got a lot of knowledge in using my computer plus its software. I can call myself speaking pretty fluent adobe indesign, illustrator, photoshop and xd. further I got web development skills in html, css and a bit in php and over the years i've realized some projects using premiere, after effects, cinema4d and of course wordpress.

socially not akward

a key competence in this field of profession is not only creating great designs and bringing your ideas on paper or into the computer. it's important to be able to talk to people and communicate your message. as an honest, open-minded and very outgoing person, I learned how to present my ideas and never loose my sense of humour.

preference for organisation & accounting

during my college I had my first contact with accounting and I kind of fell in love with everything that has to do with numbers and calculations. in addition to my foible for organizing, planning and creating to-do-lists these are pretty helpful features in the design-process.

staying true to my (he)art

I am convinced, as long as you're honest with yourself and your work you will get the results you aim for. first of all I put my attention to the users needs and more-over try to fulfil every task with passion. always trying to stay true to my (he)art. Apart from that, you can find me hiking or skiing in the mountains, enjoying quality time with friends or adoring the new baby leaf one of my self-bred plant has recently grown.
